About myself

My name is YingQi Hu. I am taking VMD 105 due to my major is Graphic Design, and I am interested in learning about Adobe software. I am very happy that I can create a variety of Adobe projects through learning this class. I am going to work in typography design after I finish university. In term of this project, I used black color, Serif Italic text typeface, and Serif Italic Bold display typeface.

Raster

Final Project

My raster Photoshop final project is about fantastic world. I wanted to put some things which are impossible collected together, so I adopted snow mountain being a background, and lion being my pet. On the other hand, I think I achieved my goal because I followed all of final project requirement to complete my works, and the result of this project is same as my concept.

Illustrator Final Project

In term of Illustrator, I created three AI characters by myself, and use skills from this chapter to create my project. I think I achieve my goal. I created sea turtle, fish, and crab. In this project, I used swatch, stroke, gradient and pattern skills.

Animation Final Project

Adobe Animation is what I consider most challenging project. I have no idea to create a new topic in my animation final project, so I referenced the textbook, and used Raster final project to create my animation final project. Motion tween is what I used a lot in my final project. I am very unsatisfied for my animation final project. My goal is to create a flexible animation. However, I didn't achieve my goal, I think that I lack skills to achieve my concept.
